The CodeCraft Technology

Website design & development

The business and technology have a deep relationship to each other in the present scenario. The technology is playing very significant role in all the fields of business and human life. Today various functions of businesses are performed by the technology. The technology not only has presence in our personal life but in each and every field that we can imagine.

The technology and business have great association. Any business cannot run without use and application of technology.

Engine and Machine technology, Computer and software technology, Mobile and communication technology, Internet and digital technology, AI and Automation technology and many more, are the best examples. Power supply is common to all.

Today in the changed business scenario we need best softwares, CRMS, websites, applications, communication mediums for our present business requirement.

The CodeCraft Technology understand the needs of a business what technology is best suitable to a particular business functions. If we are a new startup then we need huge machinery, equipments, tools and best automation system for manufacturing unit, We need different technology for its Sales, Marketing, advertising and promotion divisions.

For Marketing, Sales, Advertising and promotion division we need ---

- A good website to be appear on internet world wide

- We do SEO work for top ranking and performing
- We do digital marketing in comprehensive way covering all aspects
- We make advertising strategy (e.g. Google Ads, Facebook Ads and all other Social Media and commercial Ads)

NEED FOR A HIGH QUALITY WEBSITE ::

A website is the face of any company or industry. This is a place where we find all types of information about any company or business. The objectives of its establishment, mission and vision of company, its products and services we described in details. That helps us to understand the company and its business in better manners.

A high quality website follows certain rules and parameters to make it a standard website. Some of characteristics of a high quality website are mentioned below:

- High quality professional organic contents
- High quality keywords relevant to the business
- High quality titles, meta descriptions
- High quality images and videos
- Business relevance, Logo, categorization
- Right placement and alignment of subject material
- High quality graphics and design
- Safe and secured, virus and thread free, secured from hacking
- High speed, less loading time
- Very attractive page designs,
- Best features, maximum information
- Compatible for all browsers, devices and search engines

- Wide visibility, more traffic, high ranking, best performing
- More dwell time or landing time
- Best user experience, attractive material, best navigation , browsing
- And so many other features and technical aspects

These are the few characteristics of a website that make it high quality website.

TIME TAKEN TO COMPLETE A PROJECT:

A website often takes minimum 2 – 4 weeks for small website projects(1-5pages) and maximum time depends on the type of website and size of the project. This is totally depends on the size, length, type, features and complexities of the custom projects.

Website Pages	Type	Cost (Rs.)
0 – 5	Static website	20,000 – 50,000
5 – 10	Static website	30,000 – 70,000
20 -50	Static/Dynamic	50,000 – 2, 50,000.

The cost of a website project depends on multiple factors. Some of mentioned below :

- Domain name cost
- Hosting cost
- Contents writing cost
- Design cost UX/UI
- Development cost (Project developed by dedicated engineers team)
- Website length (No. of pages)
- Features & functionalities (features and functionalities required in the project)
- Security (SSL etc.)
- Quality (Followed all technical aspects and engineering norms with high quality code)
- Level of complexities , difficulties and logics in the project
- SEO Aspects
- Responsiveness (Compatible for all devices and browsers)
- Website testing (Testing of all technical and development aspects)
- Total development hours
- Dedicated team of engineers and technicians
- SEO & Monthly maintenance charges are extra if required and permitted by client
- Infrastructure used

A dedicated team of designers and developers (Engineers) and other technicians work for an assigned project then a project takes its real shape after many phases of development and testing.

UPDATES & WORK PROGRESS REPORT

All updates and work progress will be dispatch to the client on regular basis in order to development progress. The each phase of development will be shared to the client to get his approval and to continue further development work.

THE MUTUAL COOPERATION:

The development and design work need a deep cooperation to deliver a high quality successful project. The professional design and development team required complete subject material from client side e.g.

- a. Detailed information about company and its business
- b. Detailed information about its products and services
- c. High quality images and video of the products and services
- d. Industry and fields of working
